

SenoBright™

CONTRAST-ENHANCED SPECTRAL MAMMOGRAPHY

When a mammogram and ultrasound are inconclusive, SenoBright offers a straightforward, cost-effective problem-solving alternative to MRI that delivers faster, confident diagnosis for a better patient experience.

Increase
diagnosis
confidence

HIGH
SPECIFICITY

for breast cancer diagnosis

HIGH
SENSITIVITY

to reduce false-positives and
help prevent unnecessary
biopsies and surgeries

LESS THAN
7-MINUTE EXAM

Improve
patient
experience

LESS WAITING

Perform the quick exam at
the same time, same location,
with the same equipment

REDUCED ANXIETY

Release your patient
immediately in the case of a
negative exam

Reduce
Costs

LESS EXPENSIVE...

than breast MRI, with similar
clinical performances and
better specificity

FEWER FALSE
POSITIVES...

high specificity means fewer
unnecessary biopsies and surgeries

ENHANCED MRI
AVAILABILITY...

frees up MRI time for other exams

How It Works

Contrast agent

highlights areas of unusual blood flow
